AUTHOR INDEX

ABSTRACTS 125,572 TO 171,532

The format and punctuation conventions are essentially the same as in the Molecular Formula Index except there are no hyphens listed, since articles rather than compounds are the units indexed. In the Author Index, commas indicate omission of the first three digits of the abstract number. For instance ACHARI K 128476/158897, 898 (line fifteen, column three) indicates that K. ACHARI is the author of articles 128476, 158897 and 158898. Under each author, article numbers are arranged in increasing numerical order.

Readers are cautioned to check the alternate spellings of names, especially the various ways in which Russian and Chinese names may be spelled due to the several transliteration conventions.
